RD SYSTEM

RD SYSTEM

RD System

The RD (Ratchet Dial) system hugely improves the rotational stability of the helmet onto the head, which is important for mounted Shroud. The operator can easily adjust the tension of the anti rotation wires by means of a dial which controls the circumferential straps of the harness from the back of the head.

This RD (Ratchet Dial) system has been designed and manufactured specifically for our helmets to withstand the harsh environments that the helmet experiences. In addition to the RD system, it has four quick adjustable buckles that make the strap tension on the helmet which make is easily to adjust whilst the helmet is on the head.

RD, Ratchet Dial
weight - 0,085 kgs
